November 2026 Meteor Showers

Taurid fireballs and the Leonids · peak nights and Moon conditions for the United States

Southern Taurids

Night of Nov. 4–5

Moon	Waning crescent, about 25% lit (AMS)
Rate	A few an hour; fireball swarm peaks Nov. 5
When to look	Best around midnight, low in the east before that

Northern Taurids

Night of Nov. 11–12

Moon	Thin crescent, about 4% lit (AMS)
Rate	A few an hour, slow and bright
When to look	Best around midnight; the darkest skies of the month

Leonids

Night of Nov. 16–17

Moon	About 39% lit (AMS), sets before midnight
Rate	Often fewer than 3 an hour (NASA), fast meteors
When to look	After the Moon sets, from midnight to dawn

Moon phases, November 2026 (Eastern Time)

Last quarter	Sunday, Nov. 1, 3:28 p.m. EST
New moon	Monday, Nov. 9, 2:02 a.m. EST
First quarter	Tuesday, Nov. 17, 6:48 a.m. EST
Full moon (Beaver Moon)	Tuesday, Nov. 24, 9:53 a.m. EST

Peak nights and Moon light: American Meteor Society. Leonid rate: NASA. Moon phases: U.S. Naval Observatory. Rates assume a dark sky far from city lights; expect fewer from suburbs. Give your eyes 20 minutes to adjust and look about halfway up the sky.
